

Greetings everyone

First, I'd like to thank Giselle Zamora for all the wonderful work she does in helping us share our wound care videos with our ASWC family.

There are multitude of systemic and local factors that affect wound healing. Our second audiovisual on wound care is titled “**local factors affecting wound healing**”. In this presentation we shall discuss the three most local important determinants of wound healing, that are common to all wounds.

So, when you remove the dressing, regardless of the underlying etiology, what must you look for in ANY wound?

G.S. Dhillon MD PhD

Let's begin this discussion...
